

MPAC achieves Secure Digital Transformation with MIS3 Inc.

Self-inflicting change and re-imagining their business model began over a decade ago. The “Customer Journey”, became a corporate initiative and the road towards Secure Digital Transformation was realized with the help of MIS3 Inc.

The MPAC Journey

MPAC CIO Sujit Jagdev, realized the function for Information Technology was more than a service provider, they had to become a business leader.

Technology became the business enabler for MPAC to engage their customers, empower employees, optimize their business processes and transform their brand explained MIS3 Inc. (Core Pillars to Digital Transformation).

This vision was met with several challenges faced in public sector. “How does a CIO deal with introducing the concept of Secure Digital Transformation and cloud technologies to change their business with a traditional procurement process”, said Sujit Jagdev CIO of MPAC.

The MPAC IT team began testing new and emerging next generation technologies focused on Open Source platforms. Sujit explained, “To transform in a landscape like ours, open source helped us explore new technology concepts to drive tangible business outcomes quickly, while operating within the procurement process”.
